

Quality products from
Swedish forests

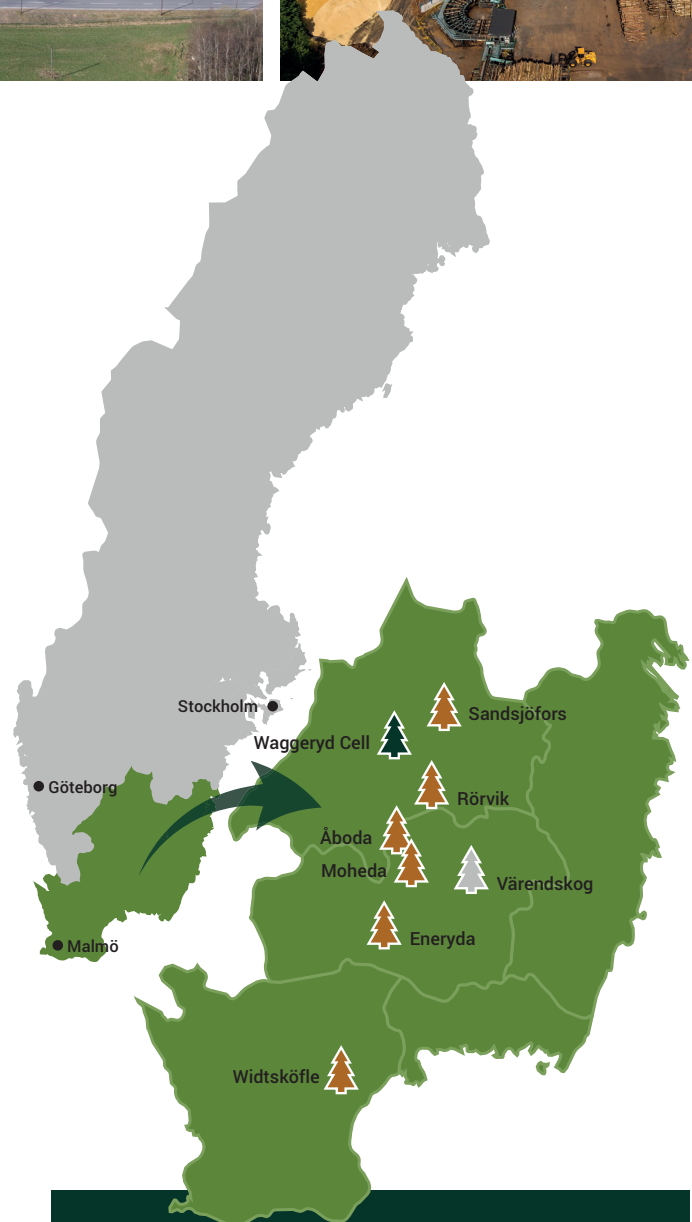

ATA Timber in short

ATA Timber is a leading Swedish producer of sawn wood products and BCTMP-pulp, operating one of Sweden's largest privately-owned sawmill and pulp industries. Founded in 1945, ATA Timber is still a family owned business with three generations actively involved in parts of the organization.

The business divisions are strategically located in southern Sweden, with seven saw lines, eight planing lines, seven batch kilns and 36 chamber kilns sited at six modern and effective production units. In addition, ATA Timber fully owns and operates Waggeryd Cell, a state-of-the-art pulp production mill, as well as ATA Värendskog, a company that purchase raw material in southern Sweden.

Together the sawmills produce 520 000 m³ sawn wood products annually, which of 80-85% is exported globally. The pulp production capacity is approximately 225 000 tonnes per year and 85% of the final product is exported. Assuring sustainability is the main priority in every aspect of the production process.

The wood chips used in the pulp production largely come from ATA Timber saw mills and chip volume required is about 1 300 000 m³. Forest regeneration is vital to preserve sustainability in the Swedish forests. ATA Timber facilitates extensive planting of approximately 3 000 000 saplings annually.

- Family Owned & Operated
- Quality Wood Products
- Sustainability Leaders
- Production Efficiency

A trustworthy partner, delivering quality products

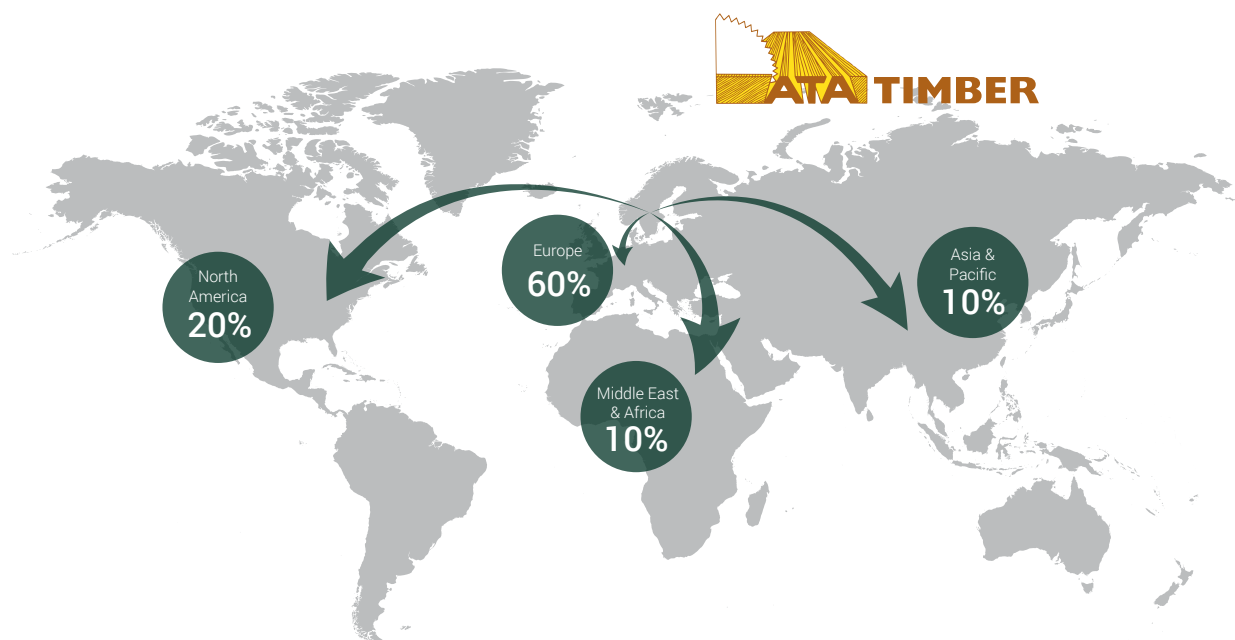

Global demand for quality wood products

ATA Timber takes pride in its products, always striving to produce sawn timber and pulp of highest quality. All raw materials come from some of the best managed and most sustainable forests in southern Sweden. The ATA Timber sawmills produce mostly pine and spruce wood products for construction.

With a deeply rooted local presence, ATA Timber works close to the forest owner and the raw material, offering all forestry services needed, often co-operating across generations. By managing the logistics chain from forest to sawmill, as well as operating the production units, ATA Timber guarantees a process which is sustainable and efficient, adding value to the clients.

ATA Timber is a dependable and committed supplier of wood products and has since the 1940's developed relationships and created collaborations with global partners. The sales process typically involves preferred agents, whom manage and expedite the sale on site.

The end result is high-quality products with strong demand in key markets, namely; Europe (Sweden, Denmark, United Kingdom, France, Holland, Belgium), the United States, Middle East (Saudi Arabia), North Africa (Egypt) and Asia (China, India).
